

List of ingredients

- Jojoba oil: (main ingredient in all products) Jojoba oil is a liquid wax that exists 97% out of liquid longchained waxesters. These esters are similar to the human skin fat. Jojoba oil is very skin friendly and makes a preserving gentle lipid film on the skin which binds moisture deep in the skin. It leaves the skin breathing and elastic. Jojoba oil contains a lot of vitamin A and E. It has a natural SPF of 4.
Contains Vitamin B, Minerals, Gadoleic acid, Ervia acid, Palmitin acid, Nervo acid
- Cacao butter: (softener/active substance) Cacao butter serves as a fat supplier. It treats the skin with vitamins, mineralon, aminoacid and lipids.
Contains Vitamin E, Vitamin K
- Shea butter: (softener/active substance) Shea butter comes from the Karititree. It smells like chocolate, nuts and butter. It has a great share of Tripertin, oil acids.
Contains Vitamin E, Beta-Karotin
- Sunflower oil: (fat resource)
Sunflower oil is a light, not greasy, mild caring oil. We use it in our products because it has a high source of linol acids and less saturated fatty acids. It makes Jojoba oil penetrate even deeper into the skin.
Contains Vitamin B6, Vitamin B12, Vitamin D, Vitamin E
- Almond oil:(fat resource)
Almond oil is a cosmetic oil for every skin type. It is not too heavy and fat. It soothes skin irritations and mixes very well with Jojoba oil.
Contains Vitamin A, Vitamin B1, Vitamin B2, Vitamin B6, Vitamin E
- Apricotkernel oil: (fat resource)
Apricotkernel oil is very skin friendly and suitable for every skin type. It penetrates very easy into the skin. It mixes very well with Jojoba oil.
Contains Vitamin A, Vitamin B, Vitamin E, Linolacid, Palmitinacid, Stearinacid
- Aloe Vera: (active substance)
Aloe Vera is proven antipruritic, cooling, anti-inflammatory and moisturising.
Contains Vitamin B1, Vitamin B2, Vitamin B6, Vitamin B12, ProVitamin A, Vitamin E, Vitamin C, Salycylacid, Saponine Sterole, Lignine, Minerals
- Beeswax: (co-emulsifier)
Beeswax is a natural skin friendly fat component. It builds a protective shield which calms dry and irritated skin.
- Essential oils: (scent/active substance) Essential oils are metabolism products from plants with a strong scent. They work anti-bacterial, anti-inflammatory and improve the blood circulation.

- Softisan: (fat resource)
Softisan is a vegan variation of lanolin. It is skin friendly and makes the cosmetic product very smooth on the skin.
- D-Panthenol: (active substance)
D-Panthenol is moisture binding, anti-inflammatory and wound healing. It helps against skin bleaching, is calming and antipruritic. D-Panthenol is Pro Vitamin B5
- Glycerin: (active substance)
Glycerin is a trivalent Alcohol. It is skin protective and makes the skin more elastic. The Glycerin that we use is from a organic production.
- Xyliance: (emulsifier)
Xyliance is a none ionic O/W emulsifier that is approved for nature cosmetics. It has got a wide fatphase tolerance and can be used in many cosmetic products. It keeps the moisture in a depot and gives the skin a 'matt' light feeling.
BDIH approved
- Emulsan: (emulsifier)
Emulsan is a PEG free emulsifier which works very good in light creams. It gives the skin a mild, moisturised and soft feeling.
- Rokonsal: (conserving substance)
Rokonsal is a high preservative, which has a scent like almond. It is made from single nature identical substances wich are very skin friendly. Rokonsal is authorised in Europe for all Nature cosmetics.
- Cetylalcohol: (bodying substance)
The main purpose af Cetylalcohol is the consistence of a cream. Creams are less fatty and not so shiny on the skin. It is a fat alcohol out of C16 atoms. It makes creams penetrate much faster.
